

SerbTracker Client - Quick Start (One Page)

1) Sign In

- Open app, enter **Username** and **Password**.
- Tap **Sign in**.

2) Main Navigation

- Tabs: **Services**, **Tracking**, **Settings**.
- Top header shows username + **Logout**.

3) Services (Daily Workflow)

- Use filters: All / Not started / In progress / Completed.
- Use search by number, customer, reference, vehicle, or type.
- Review card details: time, customer, vehicle, Adults/Children, odometer.

4) Start Order

- Tap **Start**, confirm start meter.
- Status changes to **In progress**.

5) End Order

- Tap **End**, enter end meter.
- End meter must be $\geq$ start meter and within allowed distance.
- Status changes to **Completed**.

6) Tracking

- Enable/disable tracking in **Tracking** tab.
- Use **Send location** when needed.
- Use **Show status** for logs/diagnostics.

flutter_background_geolocation Features

- Background tracking even when app is not foregrounded.
- Start/stop tracking service from app controls.
- Manual current-position send.
- Motion-state aware tracking behavior.
- Dynamic tracking config updates from Settings.
- Offline Support: if internet is unavailable , data is buffered and sent when connection returns.
- Permission and battery-optimization handling prompts.
- Tracking service stops on logout.

7) Settings

- **Language:** System / Arabic / English
- **Appearance:** System / Light / Dark
- Adjust tracking settings (ID, URL, accuracy, intervals, ...)

8) Logout

- Tap logout icon next to username.
- Session is cleared and tracking stops.

Quick Troubleshooting

- **No services:** check internet/account, then tap Retry.
- **Cannot start/end:** verify odometer value and validation message.
- **Tracking issue:** grant location permission and disable battery optimization.
